

Supplementary Figure 1

Clinical progression of a posterior scalp squamous cell carcinoma (SCC) managed with surgical excision and rotational flap reconstruction. (A) Preoperative appearance of the SCC. (B) Intraoperative view following tumor excision. (C) Postoperative appearance showing the outcome of the rotational flap reconstruction.

Supplementary Figure 3

Surgical treatment of a lower eyelid basal cell carcinoma. (A) Preoperative presentation of the tumor. (B) Intraoperative view following tumor excision. (C) Postoperative appearance after excision and reconstruction with a V-Y advancement flap.

Supplementary Figure 4

Reconstruction of a lower lip cancer with left angular involvement. (A, B, C) Sequence showing the preoperative lesion, intraoperative process, and postoperative outcome following excision and reconstruction with a mucocutaneous advancement flap.
